# Part I: Introduction

This section serves as the foundational overview for the Library Management System project. It outlines the essential aspects of the project, including its strategic objectives, functional scope, and the underlying architectural framework that guides its development and implementation. Understanding these core components is crucial for comprehending the subsequent detailed documentation.

## Project Overview

The Project Overview defines the purpose, goals, and scope of the Library Management System. It addresses the challenges faced by contemporary libraries and how this system provides a robust solution for efficient resource management, improved user access, and streamlined administrative tasks.

## System Architecture

The System Architecture outlines the high-level design and organizational structure of the Library Management System. It details the various modules, components, and their interrelationships, ensuring a scalable, secure, and maintainable platform for library operations.

# Project Overview

The Library Management System is a comprehensive desktop application developed using C# and .NET 6 with Windows Forms to modernize the operations of university and public libraries.

## Project Goals

Replace manual logging	Minimize human error	Speed up processes	Instant book access	Generate reports
Replace traditional manual logging systems.	Minimize human error in library operations.	Speed up the borrowing and return processes.	Provide instant access to book availability status.	Generate comprehensive reports and statistics.

## Technologies Used

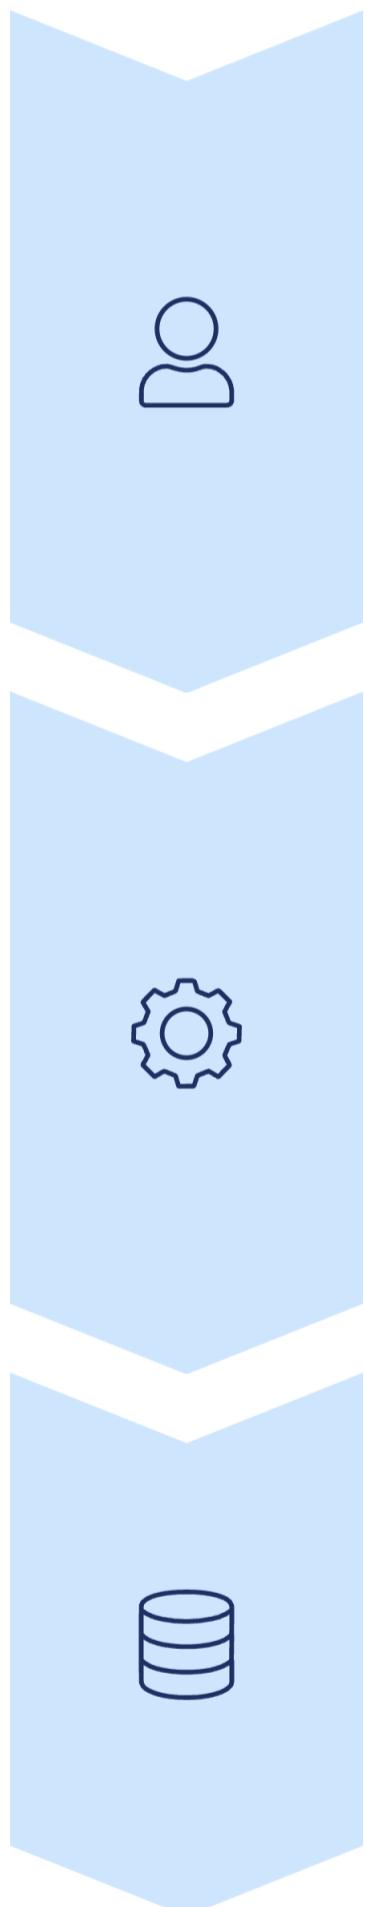

Programming Language: C# (.NET 6)	UI Framework: Windows Forms	Database: SQLite	Architecture Pattern: Repository Pattern	Data Access: ADO.NET with Microsoft.Data.Sqlite
-----------------------------------	-----------------------------	------------------	--	---

## Key Features

- Complete CRUD operations  
Complete CRUD operations for all entities.
- Multi-copy book management  
Multi-copy book management.
- Automatic loan tracking  
Automatic loan tracking.
- Foreign key constraints  
Foreign key constraints enforcement.
- Transaction-based operations  
Transaction-based operations.
- Data integrity protection  
Data integrity protection.
- Input validation  
Input validation.
- Real-time reports and statistics  
Real-time reports and statistics.

# System Architecture

The system follows a three-layer architecture:

## Presentation Layer (Forms/)

- User interface components
- Input validation
- User interaction handling

## Business Logic Layer (Data/)

- Repository pattern implementation
- Database operations
- Transaction management

## Data Layer (Models/)

- Entity definitions
- Data models

# Part II: User Interface & Features

This section covers all the user interface modules and features of the Library Management System including Main Menu, Book Management, Author Management, Publisher Management, Category Management, Member Management, Loan Management, and Reports & Statistics.

Main Menu

Book Management

Author Management

Publisher Management

Category Management

Member Management

Loan Management

Reports & Statistics

# Main Menu

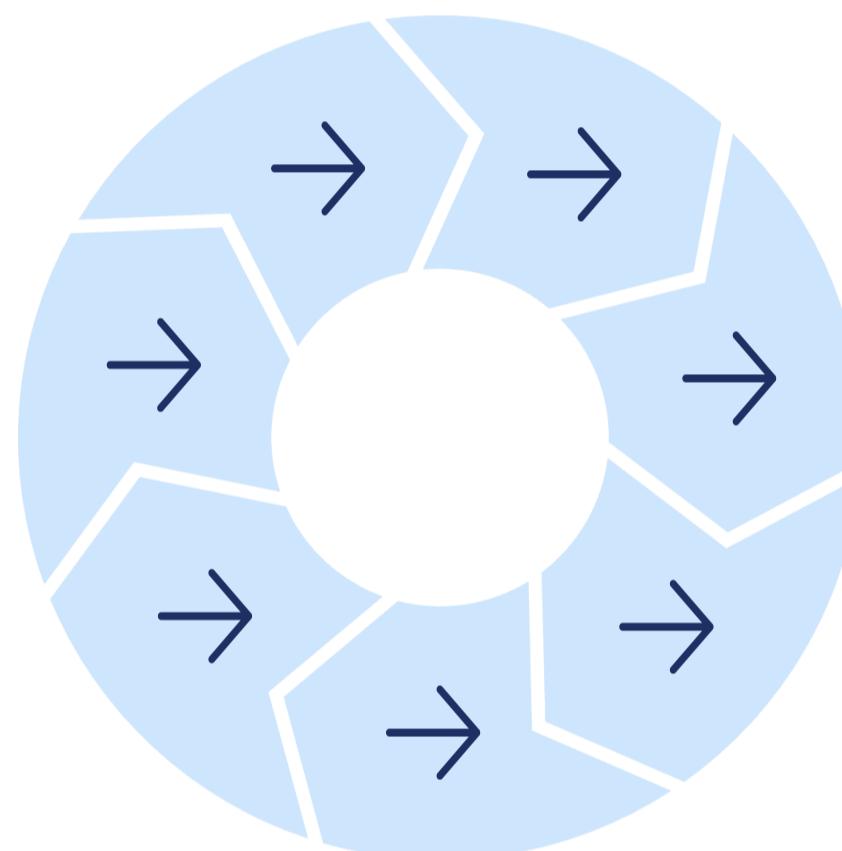

The main menu provides a clean, intuitive interface with large, accessible buttons for navigating to different modules of the system.

**Key features accessible from the main menu include:**

Book Management

Category Management

Publisher Management

Member Management

Loan Management

Reports

Author Management

# Book Management

1

## Key Functionalities

### Add Books

Librarians can add new book entries by providing comprehensive details, ensuring a complete record for each title. Required fields include:

- ISBN
- Title
- Publication Year
- Edition
- Publisher
- Author
- Category
- Number of available Copies

2

### Update Books

This functionality allows modification of existing book information such as title, publication year, edition, publisher, author, category, and quantity of copies. Users can update associations with authors, publishers, and categories. **Note:** The ISBN cannot be modified once a book entry is created, as it serves as a unique identifier.

3

### Delete Books

Enables the removal of book entries from the system. When a book is deleted, the system handles cascading deletions to maintain data integrity, removing all associated loan records and other related data. A confirmation step is required to prevent accidental deletions.

## Features

- **Multi-Copy Support** Efficiently manage multiple copies of the same book title, tracking each individual copy's status and location.
- **Relationship Management** Establish and maintain clear relationships between books and their respective authors, publishers, and categories for a highly organized and easily searchable catalog.
- **Search & Filter** Robust search and filter options allow for quick retrieval of books based on various criteria like title, author, ISBN, category, and availability status.
- **Validation** Implement data validation rules to ensure the accuracy and consistency of all book information entered into the system.

Manage Books

Book Details

ISBN:	978-0007119318	Title:	Murder on the Orient Express	
Year:	1934	Edition:	1st	
Publisher:	HarperCollins	Copies:	1	
Author:				
Category:	Mystery			

Add    Update    Delete    Clear

ISBN	Title	Year	Edition	Publisher	Category
978-0007119318	Murder on the Ori...	1934	1st	HarperCollins	Mystery
978-0553103540	A Game of Thrones	1996	1st	Bantam Books	Fantasy

978-0747532743	Harry Potter and t...	1997	1st	Bloomsbury	Fantasy
978-1501142970	It	1986	1st	Scribner	Horror

# Author Management

This module maintains a comprehensive database of authors, ensuring that book records are linked to valid, existing author profiles.

## Author Information

### Author ID

Auto-generated unique identifier

### Name

Author's full name  
(required)

### Biography

Detailed author background

### Birth Date

Author's date of birth

## Operations

1

### Add

Create new author profiles

2

### Update

Modify existing author information

3

### Delete

Remove authors  
(protected if linked to books)

4

### Clear

Reset form fields

**Delete Protection:** Cannot delete authors who have books in the library.

**Manage Authors**

Author Details																											
ID:	1	Name:	J.K. Rowling																								
Bio:	British author, best known for the Harry Potter series.

5	Stephen King	American author of horror and suspense novels.																									

# Publisher Management

Tracks publishing houses to facilitate book acquisition and inventory organization.

## Operations

### Add

Register new publishers

### Update

Modify publisher details

### Delete

Remove publishers  
(protected if linked to  
books)

### Clear

Reset form

**Delete Protection:** Cannot delete publishers who have books in the library catalog.

Manage Publishers

**Publisher Details**

ID:	1
Name:	Bloomsbury
Address:	London, UK
Contact:	contact@bloomsbury.com

**Action Buttons:** Add (green), Update (orange), Delete (red), Clear (grey)

PublisherId	Name	Address	ContactInfo
1	Bloomsbury	London, UK	contact@bloomsbury.c...
2	Bantam Books	New York, USA	info@bantam.com
3	Allen & Unwin	Sydney, Australia	support@allenandunwi...
4	HarperCollins	New York, USA	help@harpercollins.com
5	Scribner	New York, USA	contact@scribner.com

# Category Management

Organizes books into genres and categories for easier browsing and classification.

1

2

3

## Category Information

- **Category ID:** Auto-generated unique identifier
- **Name:** Category name e.g., Fantasy, Science Fiction, Mystery.

## Pre-loaded Categories

1. Fantasy
2. Science Fiction
3. Mystery
4. Horror
5. Adventure

## Operations

Add

Create new categories

Update

Modify category names

Delete

Remove categories - protected if linked to books

Clear

Reset form

**Delete Protection:** Cannot delete categories that are assigned to books in the library.

Manage Categories

Category Details

ID:	1
Name:	Fantasy

**Add**   **Update**   **Delete**   **Clear**

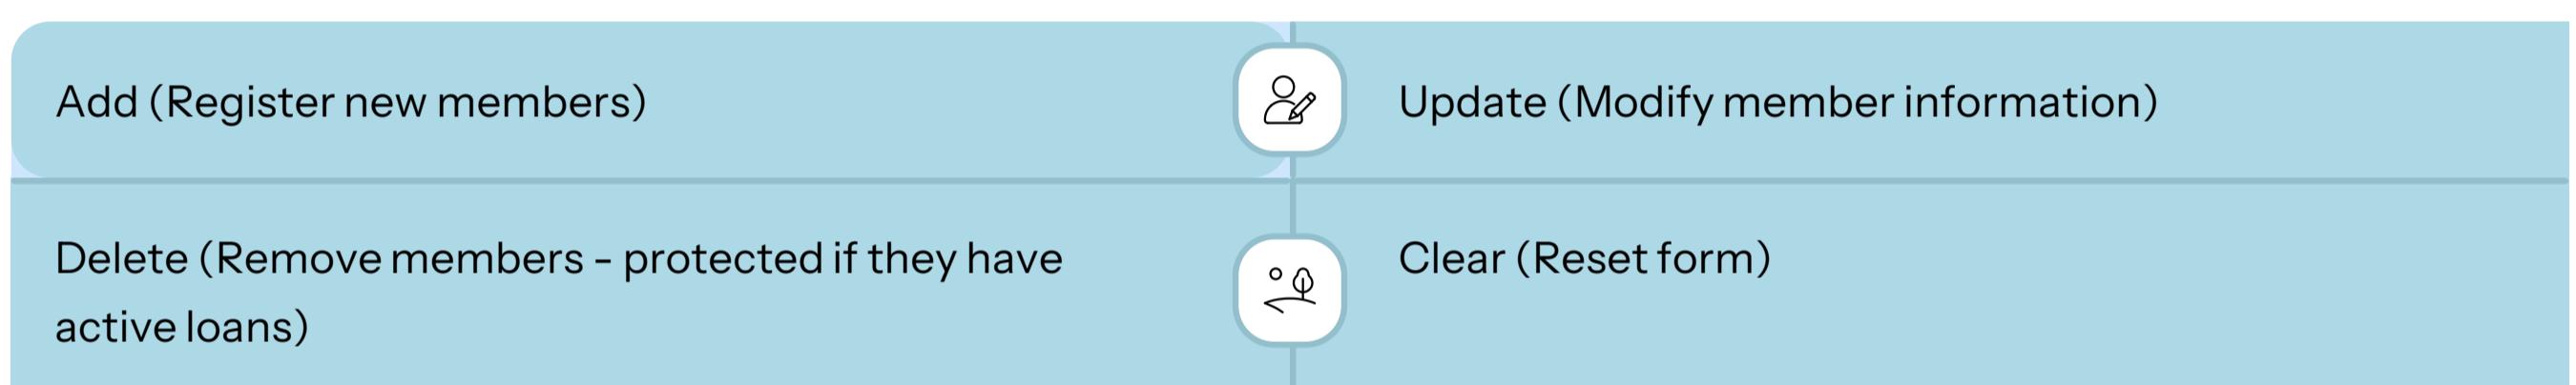

CategoryId	Name
1	Fantasy
2	Science Fiction
3	Mystery
4	Horror
5	Adventure

# Member Management

Manages the library's patron database, storing contact information and membership status.

Member ID Auto-generated unique identifier	First Name Member's first name - required	Last Name Member's last name - required	Email Email address - validated
Phone Contact phone number	Address Physical address	Join Date Automatically set to current date	

## Operations

## Additional Rules

- Email Validation:** Basic email format validation (must contain @ and .).
- Delete Protection:** Cannot delete members with active (unreturned) loans.

The screenshot shows a Windows-style application window titled "Manage Members". The interface includes a toolbar with "Add", "Update", "Delete", and "Clear" buttons, and a "Member Details" form with fields for Member ID, First Name, Last Name, Email, Phone, and Address. Below the form is a table displaying member data with columns: MemberId, FirstName, LastName, Email, Phone, Address, and JoinDate. The table contains five entries with sample data.

MemberId	FirstName	LastName	Email	Phone	Address	JoinDate
1	John	Doe	john.doe@email.com	555-0101		1/15/2023
2	Jane	Smith	jane.smith@email.com	555-0102		2/20/2023
3	Alice	Johnson	alice.j@email.com	555-0103		3/10/2023
4	Bob	Wilson	bob.w@email.com	555-0104		4/5/2023
5	Eva	Brown	eva.b@email.com	555-0105		5/12/2023

Manage Loans

Issue New Loan

Member:	John	Available Book:	A Game of Thrones
Issue Date:	12/4/2025	Due Date:	12/18/2025

**Issue Loan** **Return** **Refresh** **Add Copy**

LoanId	Member	Book	CopyID	IssueDate	DueDate	ReturnDate
1	John Doe	Harry Potter a...	1	10/1/2023	10/15/2023	Active
2	Jane Smith	A Game of Th...	2	9/1/2023	9/15/2023	9/10/2023
3	Alice Johnson	The Fellowship...	3	8/1/2023	8/15/2023	Active

# Loan Management

The circulation engine of the system, handling the complete check-out and check-in processes.

## Loan Workflow

### Issue Loan

1. Select member from dropdown
2. Select available book from dropdown (only books with available copies shown)
3. Set issue date (default: today)
4. Set due date (default: 14 days from issue date)
5. Click "Issue Loan"
6. System automatically selects first available copy, creates loan record, updates copy status to "Loaned"

### Return Book

1. Select loan from the grid
2. Click "Return"
3. System automatically sets return date, updates copy status to "Available", marks loan as "Returned"

## Key Features

### Automatic Copy Selection

Streamlines the process of assigning available book copies.

### Status Tracking

Monitors the real-time status of all loaned books.

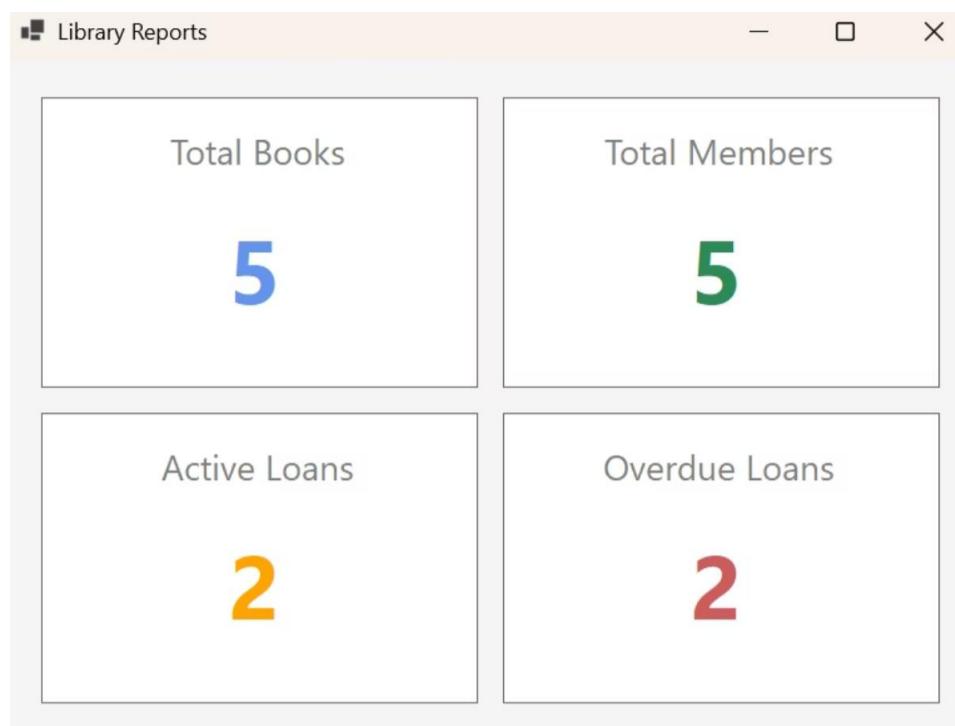

### Date Management

Handles issue and due dates with default settings for efficiency.

### Add Copy Button

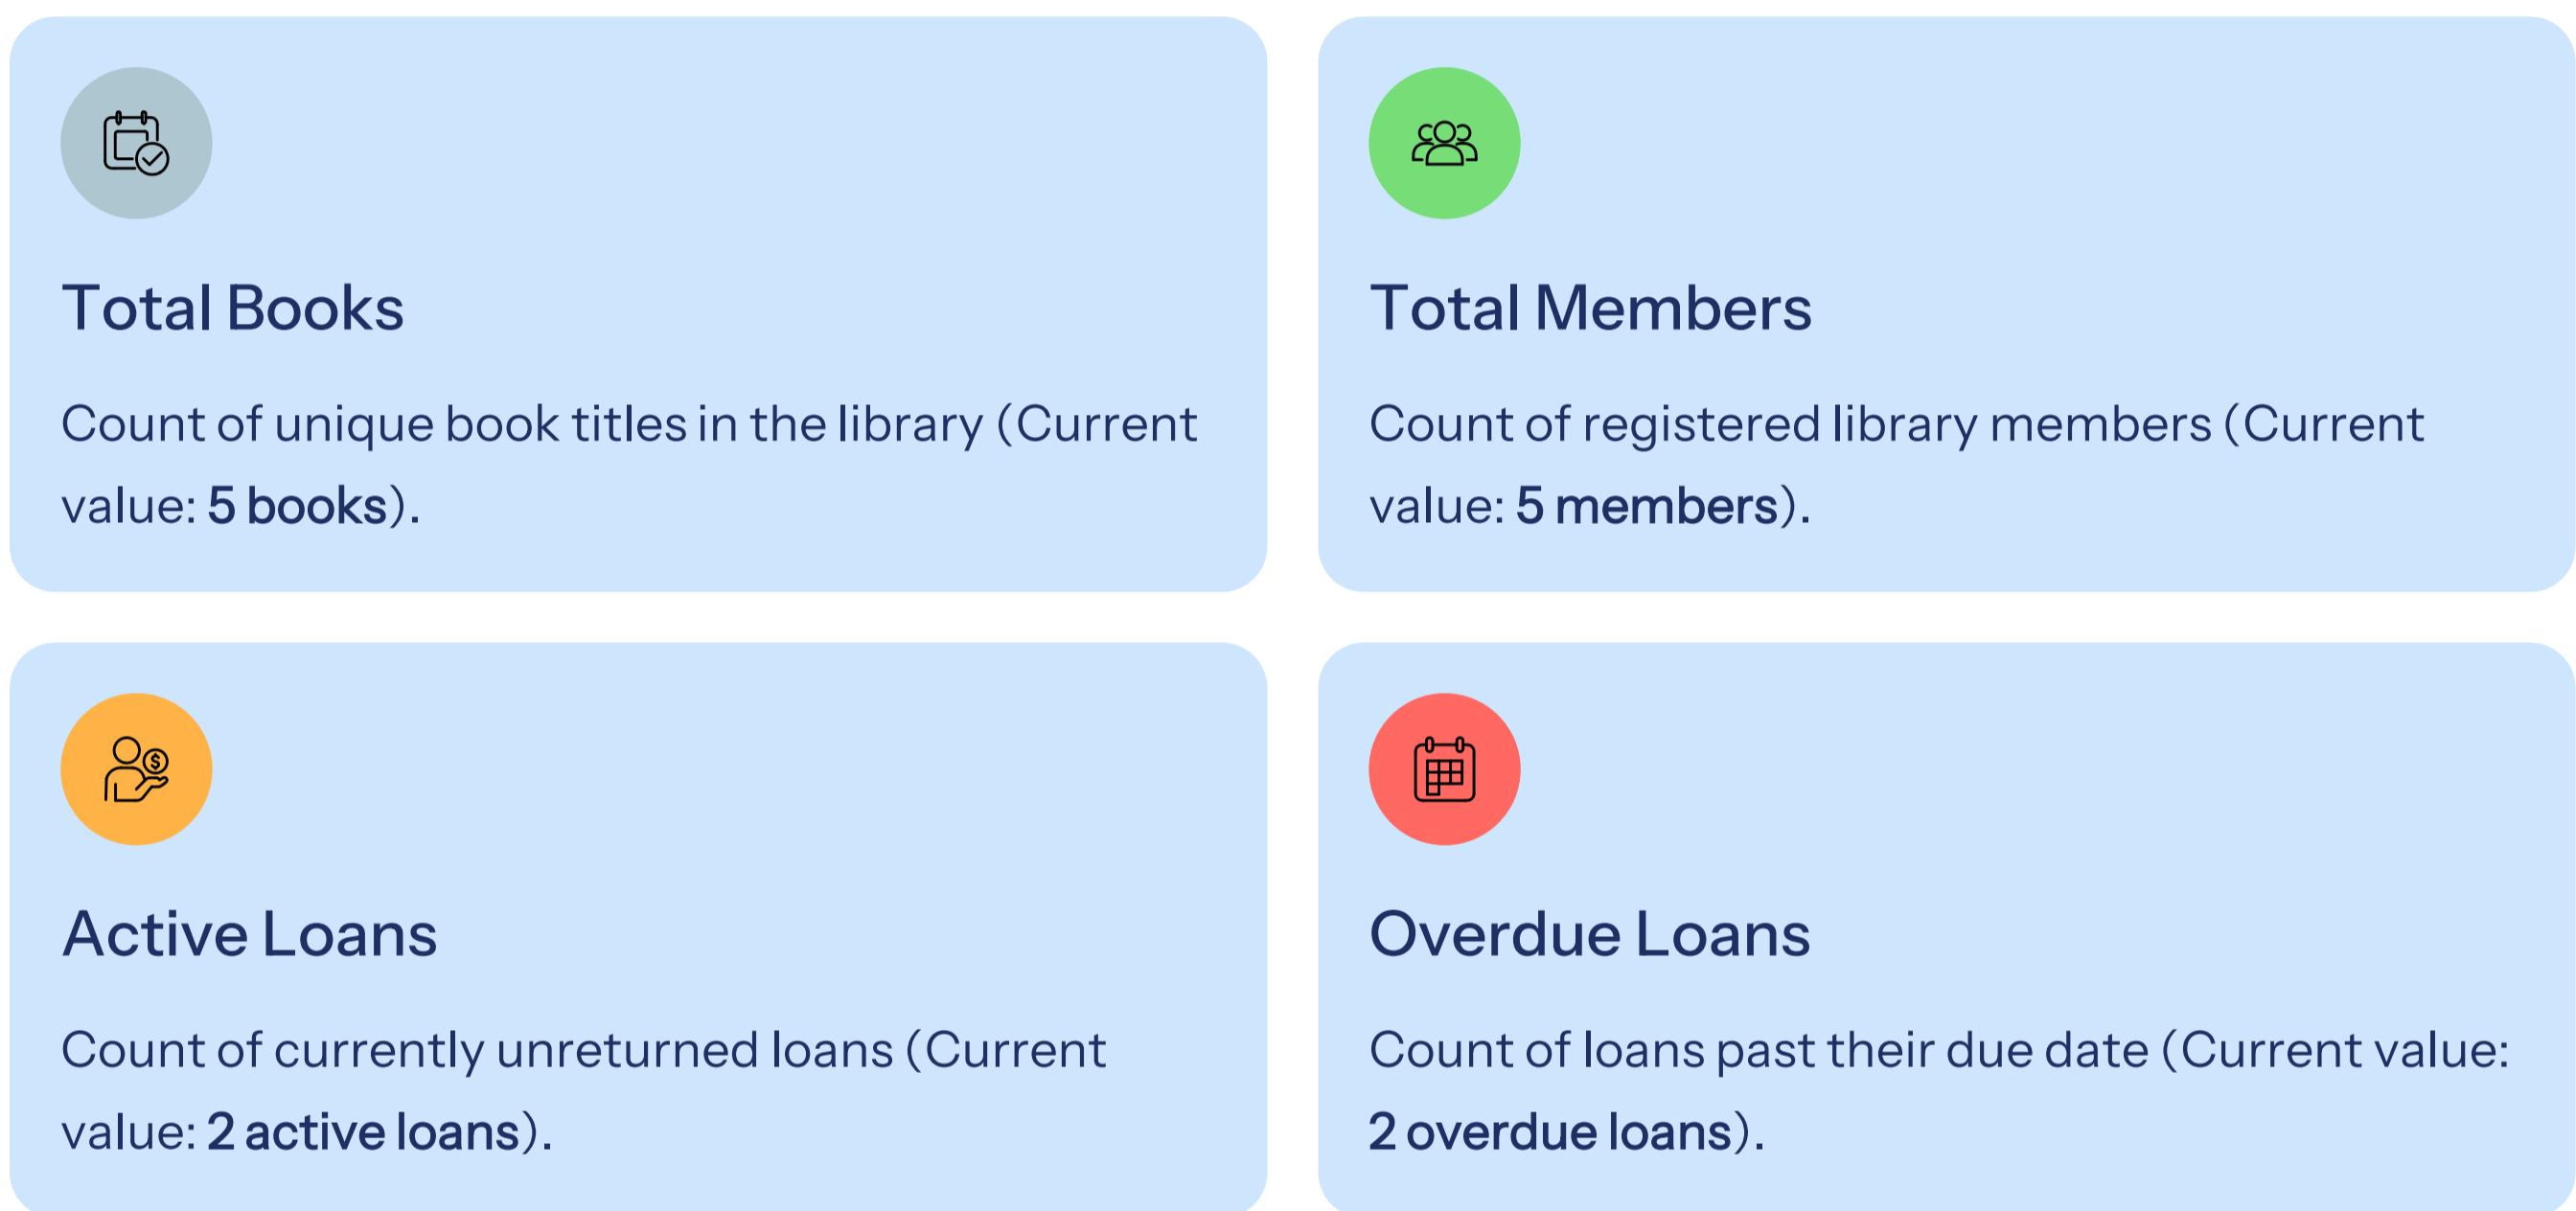

Allows for easy addition of new book copies to the system.

# Reports & Statistics

Provides visual insights into library operations to aid in decision-making.

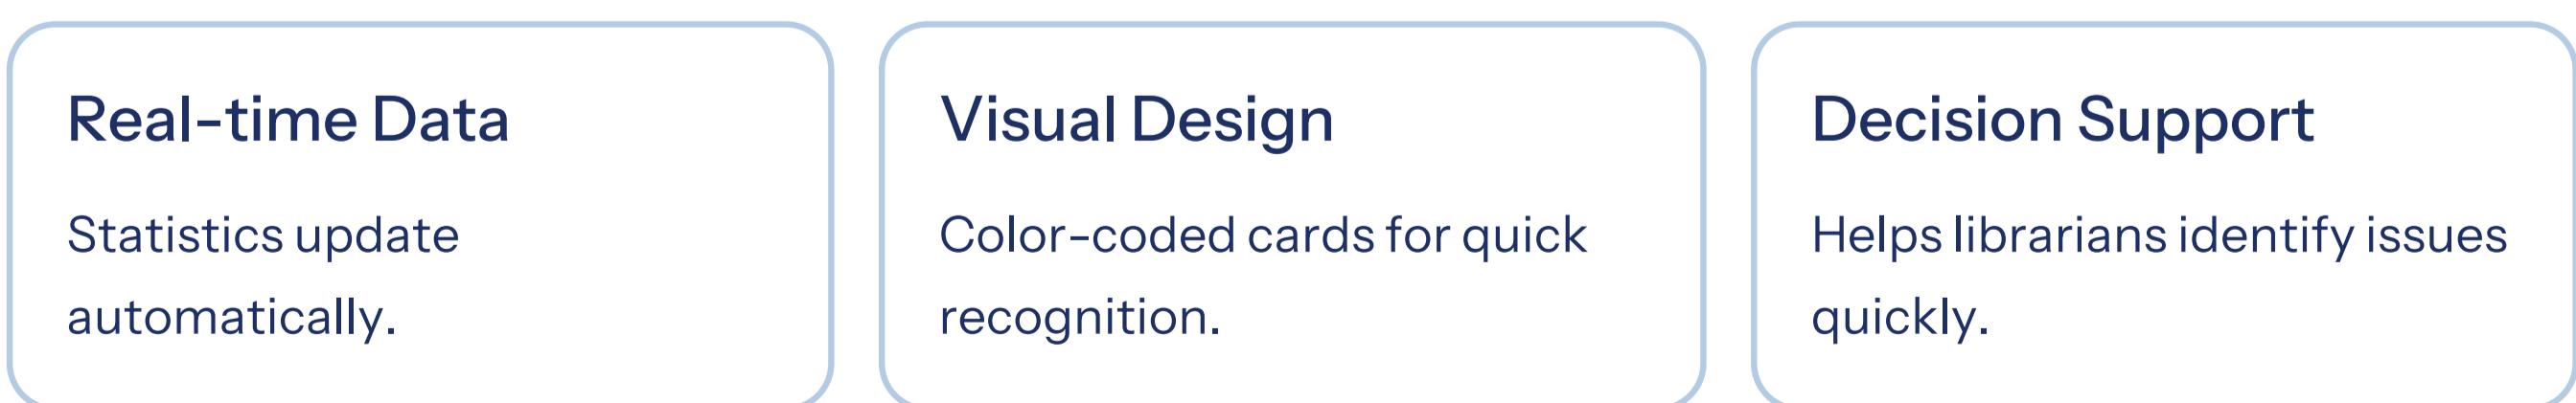

## Key Performance Indicators

The library's key performance indicators provide a snapshot of its current operational status, offering valuable data for strategic planning.

This bar chart visually represents the current values for each key performance indicator, making it easy to compare and understand the library's metrics at a glance.

## Benefits

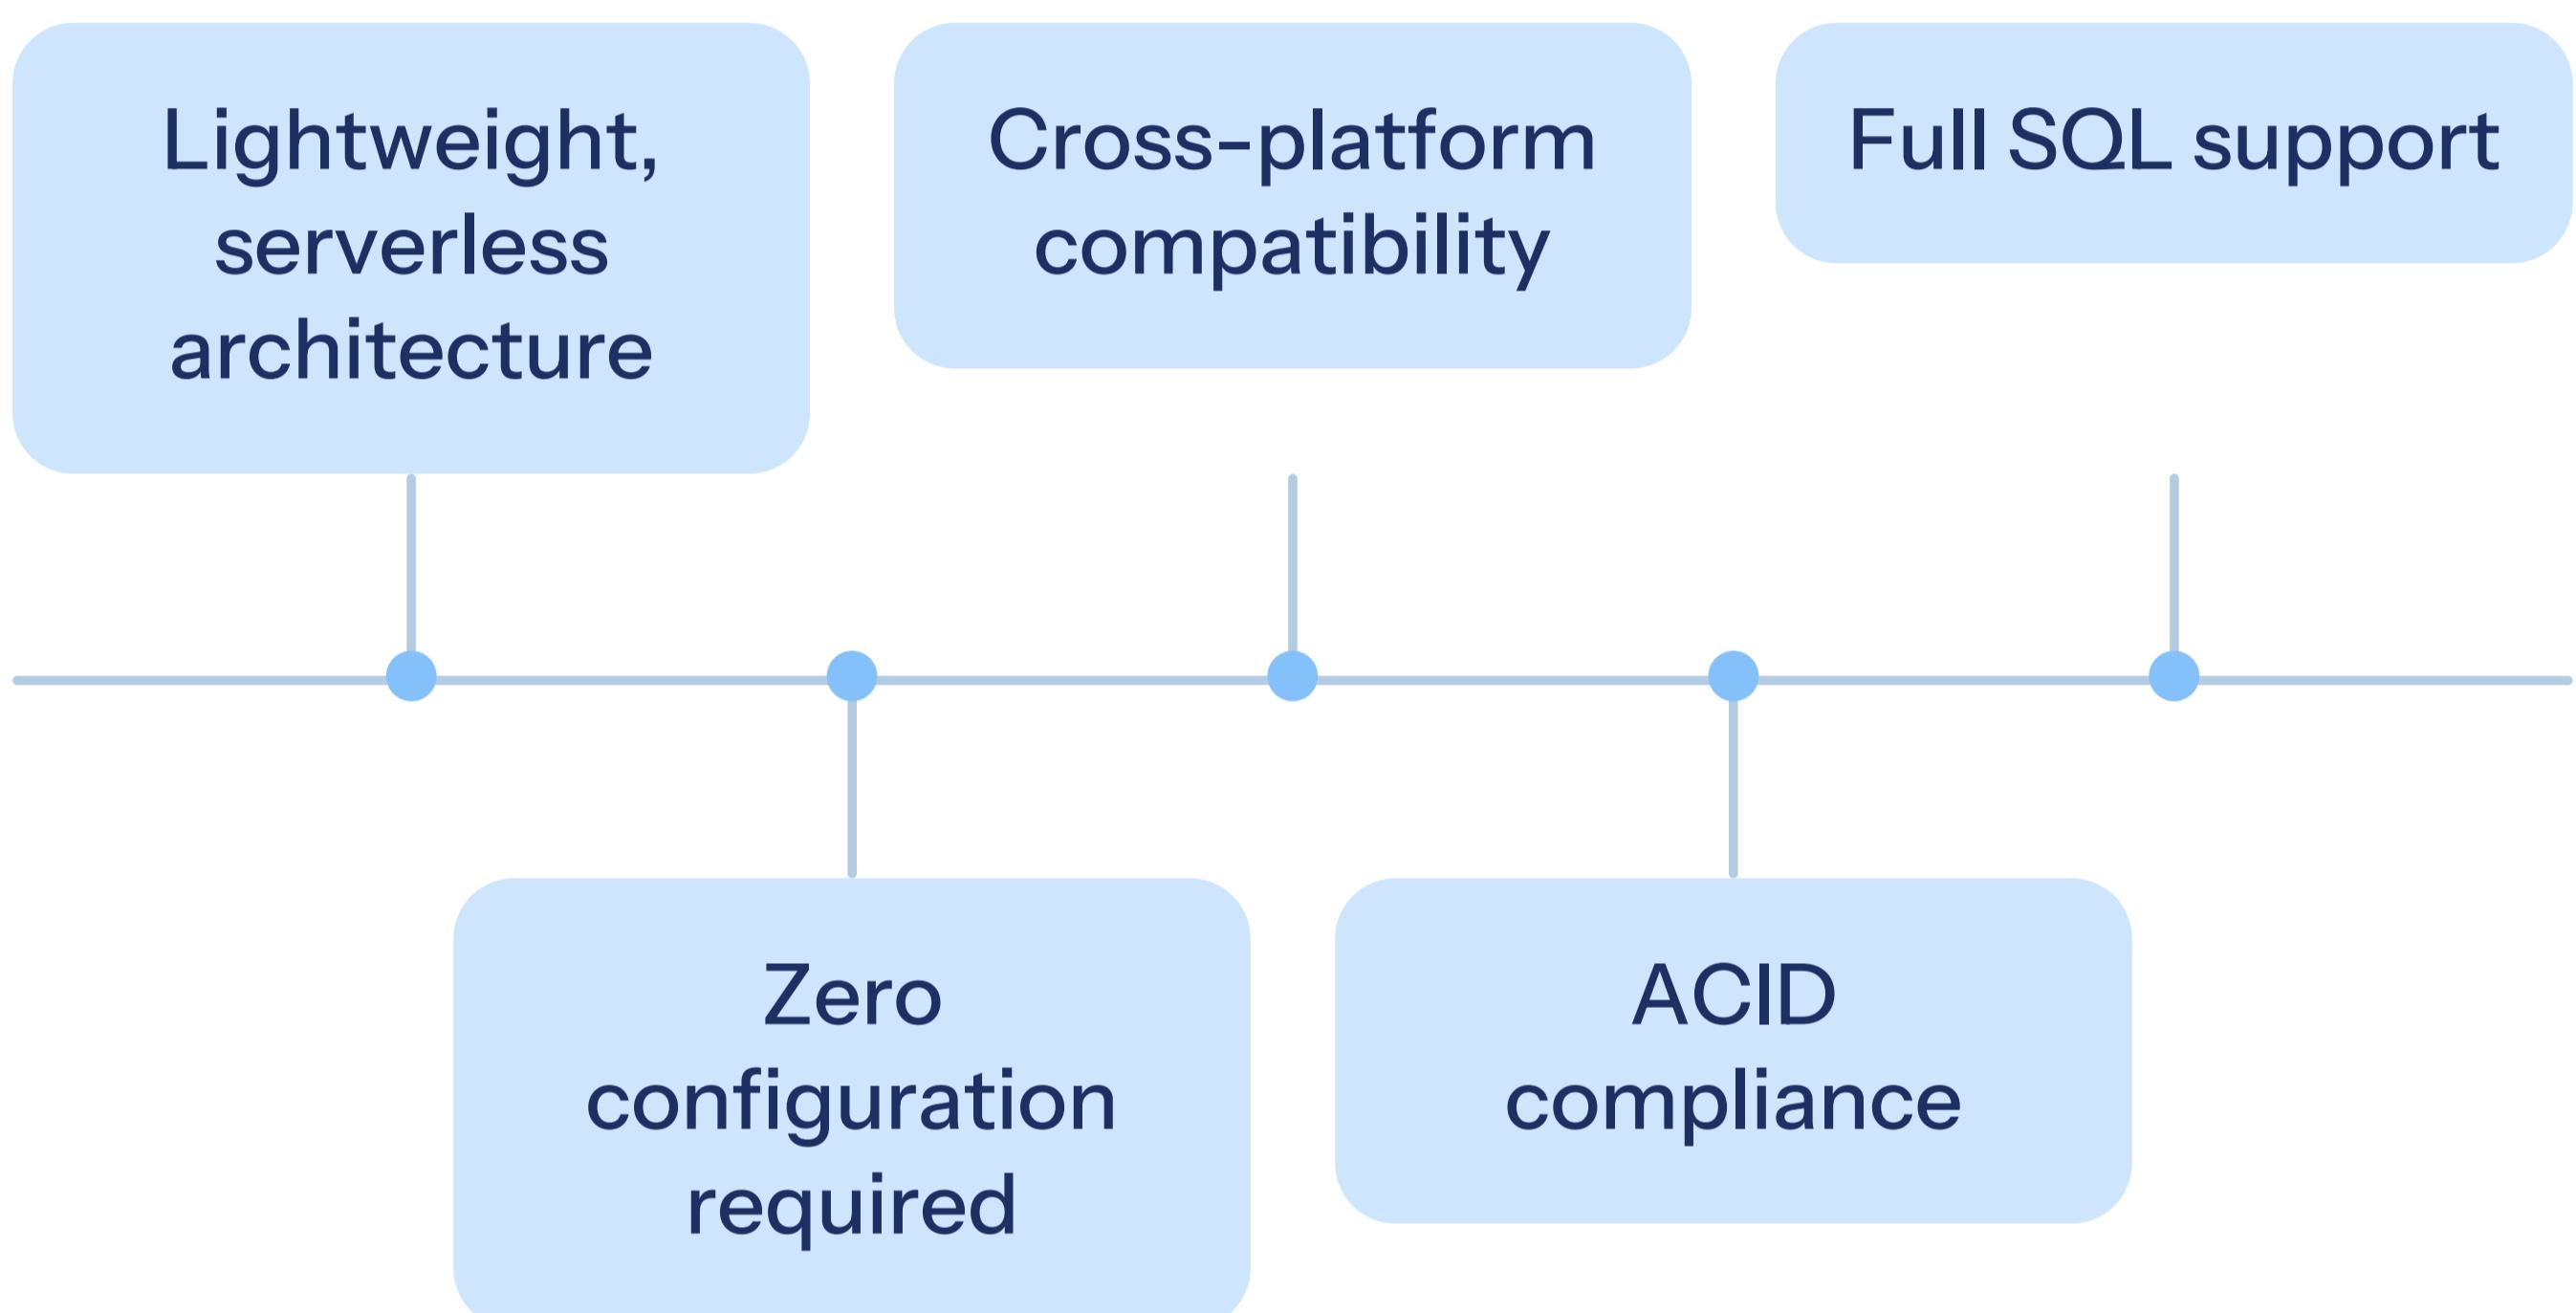

The reporting features empower library staff with immediate, clear, and actionable data to maintain efficient operations and improve user experience.

# Part III: Technical Architecture

## Database Design

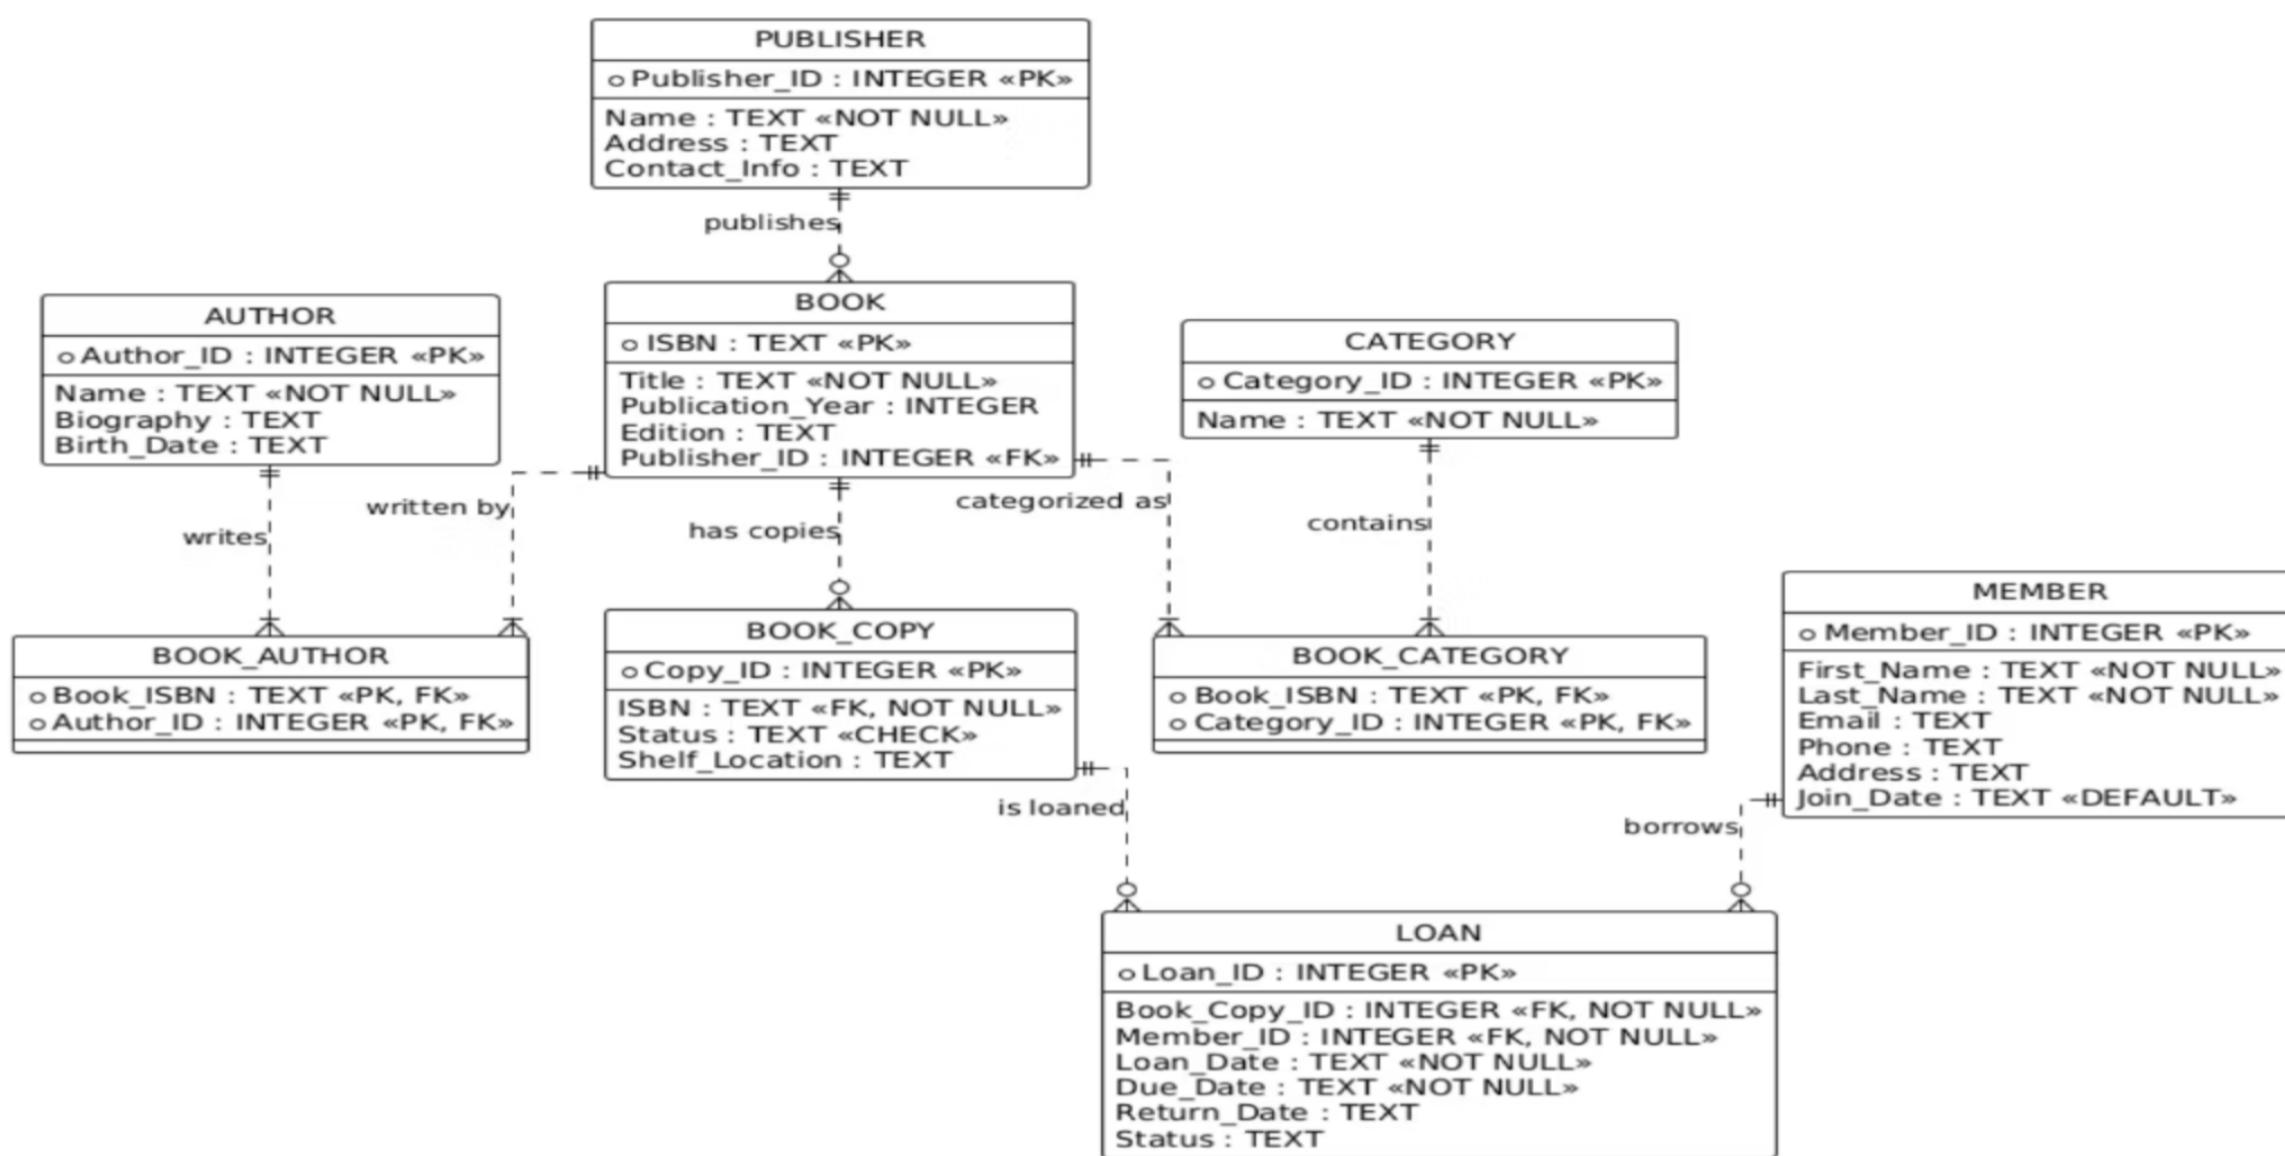

The system uses SQLite as its database engine, providing:

## Database Features

<b>Foreign Key Constraints</b> Enabled to enforce referential integrity	<b>Auto-increment Primary Keys</b> For all ID fields	<b>Check Constraints</b> For status fields e.g., Available, Loaned, Lost
<b>Default Values</b> For join dates and timestamps		<b>NOT NULL Constraints</b> For required fields

# Entity Relationship Diagram

The following ERD illustrates the complete database structure with all 9 tables and their relationships.

## Relationship Summary

### One-to-Many Relationships

- PUBLISHER → BOOK**: One publisher can publish many books
- BOOK → BOOK\_COPY**: One book can have many physical copies
- BOOK\_COPY → LOAN**: One copy can be loaned multiple times
- MEMBER → LOAN**: One member can have multiple loans

### Many-to-Many Relationships

- BOOK ↔ AUTHOR**: Books can have multiple authors, authors can write multiple books via **BOOK\_AUTHOR** junction table
- BOOK ↔ CATEGORY**: Books can belong to multiple categories, categories can contain multiple books via **BOOK\_CATEGORY** junction table

# Database Tables - Complete Schema

The library management system is built upon a robust relational database comprising 9 interconnected tables, each designed to store specific information essential for library operations. Below is a detailed overview of each table, including its primary function, key identifiers, and constraints.

1

## PUBLISHER Table

Stores publishing house information.

- **Primary Key:** Publisher\_ID
- **Required Fields:** Name

2

## AUTHOR Table

Stores author information and biographies.

- **Primary Key:** Author\_ID
- **Required Fields:** Name

3

## CATEGORY Table

Stores book categories/genres.

- **Primary Key:** Category\_ID
- **Required Fields:** Name

4

## BOOK Table

Stores core book information.

- **Primary Key:** ISBN
- **Foreign Keys:** Publisher\_ID → PUBLISHER
- **Required Fields:** ISBN, Title

5

## BOOK\_AUTHOR Table (Junction)

Many-to-many relationship between books and authors.

- **Composite Primary Key:** (Book\_ISBN, Author\_ID)

6

## BOOK\_CATEGORY Table (Junction)

Many-to-many relationship between books and categories.

- **Composite Primary Key:** (Book\_ISBN, Category\_ID)

7

## BOOK\_COPY Table

Tracks individual physical copies of books.

- **Primary Key:** Copy\_ID
- **Foreign Keys:** ISBN → BOOK
- **Check Constraint:** Status must be 'Available', 'Loaned', or 'Lost'.

8

## MEMBER Table

Stores library member information.

- **Primary Key:** Member\_ID
- **Required Fields:** First\_Name, Last\_Name
- **Default Value:** Join\_Date = current date

9

## LOAN Table

Tracks book loans and returns.

- **Primary Key:** Loan\_ID
- **Foreign Keys:** Book\_Copy\_ID → BOOK\_COPY, Member\_ID → MEMBER
- **Required Fields:** Book\_Copy\_ID, Member\_ID, Loan\_Date, Due\_Date

# Part IV: Security & Data Integrity

## Security Features

1

### Foreign Key Enforcement

SQLite foreign key constraints are explicitly enabled to prevent invalid references between tables, orphaned records, and data inconsistencies.

```
Connection string: Data Source=LibraryDB.sqlite;Foreign Keys=True;
```

2

### Delete Protection

The system implements intelligent delete protection.

- **Members:** Cannot delete members with active loans. Returned loans are automatically deleted.
- **Authors:** Cannot delete authors with books in the library.
- **Publishers:** Cannot delete publishers with books.
- **Categories:** Cannot delete categories with books.

3

### Transaction-Based Operations

All multi-step operations use database transactions for atomicity, consistency, isolation, and durability.

4

### Input Validation

Email validation (must contain @ and .), Required field validation for ISBN, Title, First Name, Last Name, Name.

5

### Cascading Deletes

When deleting a book, system automatically deletes all loans, copies, author associations, and category associations.

# Part V: Conclusion

## Conclusion & Future Enhancements

The Library Management System successfully achieves its primary objectives:

## Technical Achievements

## System Statistics

Database Tables	User Interfaces	Modules	Security Features
Fully normalized schema	Complete CRUD operations	Books, Authors, Publishers, Categories, Members, Loans, Reports	Foreign keys, delete protection, transactions, validation
